

# Adobe ColdFusion (2016 release) Update 2

## Installation Instructions

The update can be installed manually, or from the administrator. This post lists down the steps for both.

### Installing the update from Administrator:

- Navigate to ColdFusion Administrator -> Server Updates -> Updates.
- Under Settings tab, check "Automatically Check for Updates" check box.
- Change the Site URL to,  
<https://cfdownload.adobe.com/pub/adobe/coldfusion/2016/prerelease/updates.xml>.  
In case a local site is configured for receiving update notifications, ensure the local site URL is backed-up before changing it to the URL mentioned above.
- Click Submit to save your changes.
- Under the "Available Updates" tab, click on the "Check for Updates" button.
- "ColdFusion 2016 Update 2" should be listed under the "Available updates" tab.
- Click on the "Download and Install" button to install the update.

### Installing the update manually:

- Click on the below link to download the update JAR,  
<https://cfdownload.adobe.com/pub/adobe/coldfusion/2016/prerelease/update2/hotfix-002-299076.jar>.
- Execute the below command on the downloaded JAR.  
Windows: `<cf_root>/jre/bin/java.exe -jar <jar-file-dir>/hotfix-002-299076.jar`  
Linux based platforms: `<cf_root>/jre/bin/java -jar <jar-file-dir>/hotfix-002-299076.jar`

Ensure JRE bundled with CF is used for executing the downloaded JAR. For standalone CF, this must be at, `<cf_root>/jre/bin`

**MD5 Checksum:** ff3e55c6fbd5507ccf578ae9020ddb61

For further details on the manual application of the updater follow the below help article,

[http://help.adobe.com/en\\_US/ColdFusion/10.0/Admin/WSe61e35da8d318518-33adffe0134c60cd31c-7ffe.html](http://help.adobe.com/en_US/ColdFusion/10.0/Admin/WSe61e35da8d318518-33adffe0134c60cd31c-7ffe.html)

### Post Install:

- ColdFusion build number after applying the update must be 2016,0,02,299076.
