

## Bugs fixed in ColdFusion Builder (2016 release) Update 3 pre-release

<b>Bug ID</b>	<b>Description</b>	<b>Product area</b>
<a href="#">4130096</a>	Code assist for cfloop attributes 'from' and 'to' are incorrect.	Editor features
<a href="#">4112094</a>	Code assist does not list variables that are declared outside the function when tried as local.	Editor features
<a href="#">3818319</a>	cfclient code assist missing for arrayEach, arraySort, arrayMap, arrayReduce, and member functions, each, sort, map, and reduce.	Editor features
<a href="#">3730363</a>	Custom code folding does not work with the shortcut <i>Ctrl+Alt+F</i> .	Editor features
<a href="#">4166921</a>	In the CF Servers tab, you are unable to see any button. Instead, you see the message, "Failed to create the part's controls". There is also a <code>java.lang.NullPointerException</code> error.	General-IDE
<a href="#">4130054</a>	At present, if a file has a problem, it is only identifiable from the Security Analyzer pane. There should be an indicator in the navigator pane to make it easier to spot files that have issues.	Security Code Analyzer
<a href="#">4147846</a>	The Unscanned Files pane should display the files in a tree-like view.	Security Code Analyzer
<a href="#">4121374</a>	ColdFusion Builder to support latest Cordova version (v6.0.0)	PhoneGap

## Known issue in this pre-release

<b>Bug ID</b>	<b>Description</b>	<b>Product area</b>
<a href="#">4174895</a>	When running a Security Analyzer scan in a project or folders containing multiple files and checking the files and folders after the scan completes, there is a time lag in putting markers over folder/files in Security Code Analyzer navigator.	Security Code Analyzer
